REASONS FOR ALLOWANCE

1. Claims 1-15 are allowed.
2. The following is an examiner's statement of reasons for allowance:

The present invention of claims 1, 6 and 11 relates to a computer-implemented method, a computer program product recorded on a computer-readable medium, and a system for researching product dynamics in market baskets in conjunction with aggregate market basket properties. As to method claim 1, the closest prior art Chen et al. (U.S. Patent 6,377,934) teach a computer-implemented method of processing market research data including aggregate sales data concerning items grouped in a plurality of market baskets and sold during retail sales transactions of a retailer comprising the steps of receiving analysis parameters from said retailer for use in analyzing said market research data; receiving said aggregate sales data; and analyzing said aggregate sales data based on said market basket groupings and determining if any of said market basket groupings display characteristics identified by said analysis parameters. However, Chen et al. and the prior art of record fail to teach or suggest that for all market basket groupings which have been determined to display said characteristics, enhancing said aggregate sales data concerning each market basket grouping by embedding in said aggregate sales data an "imaginary item" for each characteristic(s) displayed by each market basket grouping.

Jacobi et al. (U.S. Patent 6,317,722) in combination with Chen et al. teach mapping of items to similar items by an off-line process, which identifies correlations between known interests of users in particular items. The mappings are generated by

Art Unit: 3623

analyzing user purchase histories to identify correlations between purchases of items. Jacobi et al. further teach using the contents of a user's shopping cart as inputs to the recommendation service; and the use of a data structure, which maps products to set of related products based on user histories, and for each of the products in a shopping cart of the user, identifies a plurality of sets of related products. However, Jacobi et al. does not, alone or in combination with Chen et al., teach or suggest the embedding in said aggregate sales data an "imaginary item" for each characteristic(s) displayed by each market basket grouping.

Claims 6-15 substantially recite the same limitations as that of claims 1-5 with the distinction of the recited method being a computer program product recorded on a computer-readable medium, and a system. Hence the allowability of claims 1-5 as applied above applies to claims 6-15.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure

- Tuzhilin et al. (WIPO WO 00/08632) disclose data mining queries that when executed retrieve the patterns specified by the user from a database. The invention relates to a method for organizing, updating and helping determine which "patterns" or association amongst data in a database are of interest to a user of the database.
